ELKAY CROSTOWN SINK COLLECTION

Hours:

Mon—Thurs:

7am-5pm

Friday:

7am-4pm

"Urban Design with Universal Appeal" -

For anyone looking for a new stainless steel kitchen sink, the Crosstown Collection from Elkay may be the way to go. These rectangular sinks come in undermount and Universal mount styles. The Universal mount sinks are made with

the Slim Rim to allow them to be undermounted or top-mounted. Made from 18 gauge nickel-bearing stainless steel, they also have slightly rounded 5/8" corners for easy cleaning and Sound Guard undercoating to reduce noise and condensation. Some of the styles include single and double bowls, bar sink sizes, and front apron sinks. Many of the sinks come with bottom grids or have the grids available as additional options as well as a cutting board option.

For more information on **Elkay Crosstown** sinks, contact Lori or Julie with **Northern Plains Plumbing** at (701) 222-2155.

Happy Valentine's Day

ADAM'S HVAC SERVICE TIP OF THE MONTH

With today's homes being built so tight, the need for fresh air is very important to the health of the home as well as you. At Northern Plains Heating & Air, we can come out and assess your home to retro-fit one of our many options for Air Exchangers.

For more information, contact Adam at 222-2155 ext. 217.

PAPER FACTS

- The average American family uses 119 rolls of toilet paper each year.
- Toilet paper debuted in 1857 in the United States and was sold as flat sheets.
- Scott Paper Company sold the first *roll* of toilet paper in 1890.
- The first culture to use paper for personal hygiene was the Chinese—dating back to the 6th Century!

FEATURED PRODUCT: ARTESSO KITCHEN FAUCET

Mix industrial and traditional with the new Artesso bridge kitchen faucet from Brizo. The refined design of this kitchen faucet would look great on any kitchen sink and be a great addition to both modern and traditional design styles. This collection also features single handle and prep faucet styles and comes in chrome, polished nickel, stainless and bronze. Contact us for more information.

Great for tech-minded homeowners to control from your smart phone or for the Snow Birds that want to check their system from another location.

Air Exchangers

There are many options and sizes for air exchangers. Contact Adam with Heating & Air at (701) 222-2155 to assess your home and help you decide on the best fit for your needs.

SAFEGUARDING LIFE'S GREATEST INVESTMENTS
 Nothing is More Important Than the Health of Family and Home

- Today's homes are airtight.
- The need for ventilation has never been more important.
- RenewAir is uniquely qualified to provide this critical indoor component.

The Natural Choice for Fresher Air

RenewAir's advanced ventilation products are based upon a simple principle - bring equal amounts of healthier, fresh air into your home while exhausting the same amount out, and do this in the best energy efficient manner as possible. Unlike ordinary residential ventilation systems, RenewAir handles both exhaust and fresh airflows, while also moderating humidity and temperature extremes during summer as well as winter. This results in the very efficient delivery of fresh air while exhausting unhealthy stale air including odors, excess carbon dioxide, formaldehyde, and other harmful gaseous pollutants, regardless of the time of year or where you live.

Advanced Energy Recovery Ventilation Versus Bathroom Fans

Simple bath fans are often promoted to provide your home's critical indoor fresh air component. First and foremost, a bath fan ventilation system has no energy recovery component. RenewAir's remarkable state-of-the-art energy recovery core preconditions the incoming ventilation air using the available energy in the exhaust air leaving the home.

Freshness, bath fans only draw air in one direction - out of your home, placing your tightly built home under negative pressure. RenewAir's balanced approach maintains the home under neutral or balanced pressure, avoiding drawing air into or out of the home's energy envelope. Balanced ventilation decreases the possibility of condensation at points where hot air meets cold air within the building envelope as well as unbalanced hot or cold air infiltration. Unlike condensation inside the home or within the building envelope can lead to unwanted mold, rot, and subsequent structural damage.

In new construction and remodel situations, RenewAir Energy Recovery Ventilation (ERV) systems can be used in place of bath fans with a RenewAir control conveniently placed in each bathroom while still providing energy efficient, balanced whole house ventilation.
