How to Create a Hot Beverage Station

If you are a frequent coffee, tea or even hot cocoa drinker, this might be the kitchen idea for you! Create a hot beverage station in these four easy steps.

1. *Dedicate the space.* This is probably something you'll use daily so take-over a corner of your kitchen counter or that rarely used wet bar.
2. *Bring out the gadgets.* Set out your espresso machine or coffee press and put them directly in front of outlets to hide the cords. Add a beverage faucet with reverse osmosis for filtered drinking water or an instant hot water dispenser for tea and instant drink mixes. If you're converting a wet bar with a small fridge, use it for cream and milk!
3. *Stock the good stuff.* Hide away the cocktail supplies and bring out your pretty mugs and teacups. Stock your shelves with high quality coffees & teas and tasty garnishes like marshmallows and peppermint sticks.
4. *Add some ambience.* What do you love about your favorite coffee shop? Hang some cute décor, set out your favorite reading material or add a wireless speaker to play your favorite tunes.

Now you're ready to warm up this winter with your new beverage station!

Instant Hot Water Dispensers

The InSinkEerator company offers hot water dispensers that give you instant 200° water. This is perfect for making tea, hot cocoa, hot cereals or even preparing sauces & mixes. Utilizing a 2/3 gallon stainless steel tank located beneath your sink and a stylish faucet that fits in a standard sink opening, it is a great addition to any kitchen.

Featured Products: R.O. Systems with Beverage Faucets

Reverse Osmosis Systems—Improve your drinking water by adding a PS-5 drinking water system. The PS-5 system will give you bottled-water quality water right from the tap in your home while helping protect the environment. The system reduces the amount of reject water sent down the drain by 50%. A reverse osmosis system will help eliminate taste, odor, dirt, salts, chlorine, lead and more. This system includes a water faucet to add to your sink.

Delta Beverage Faucets—If you want to upgrade your reverse osmosis system, take a look at the stylish beverage faucets from Delta. These faucets are available in traditional or transitional styles and can be ordered with Delta’s Touch2O technology. Because they are from Delta, they will perfectly coordinate with your Delta kitchen faucet and can come in a matching faucet finish.

To add a beverage faucet to your home, contact Lori or Julie with Northern Plains Plumbing at (701) 222-2155.

From Our Customers:

"Thank you for your excellent service ... We are so grateful that there are businesses like Northern Plains to service our need. Ann said Russ was such a kind knowledgeable gentleman. Thanks again. ... If we could give you an award - it would be an 'A-1'." - Royal Condo Owners

HVAC PREVENTATIVE MAINTENANCE

We are now offering preventative maintenance service plans for HVAC systems. These include discounts on:

- System Checks
- Repairs
- Filter Replacements
- And More!

You can find more information at www.northern-plains.com/preventative-maintenance.aspx

ADAM'S HVAC SERVICE TIP OF THE MONTH

Clogged or dirty air filters cause more heating problems than anything else. Ironically, this is the easiest and least expensive problem to fix. Regular replacement of your air filters should be done on a monthly basis in order to improve the efficiency and extend the life of your furnace or heating system. A dirty filter can severely restrict the air flow, so the system must work considerably harder to keep warm air circulating throughout the home. You will not be as comfortable, and your system will not work efficiently and properly with a dirty filter.
